Introduction

Introduction  
Motivation

Agenda

The Contract

Market

Asset  
Allocation

Stress Testing

Conclusion

- New supervisory framework for the (life) insurance industry:
  - IASB Insurance Project
  - EU Solvency II Review
- Basic concepts
  - Market consistent valuation of A & L
  - Target Capital
- Focus directed especially on
  - “Fair valuation”: what is it? How to carry out the program?
  - Market modelling
  - Identification of embedded options: the default option & safety loading

# Aims and objectives

Risk  
management  
of guarantees

Laura Ballotta  
FIN @ CASS

Introduction

Introduction  
Motivation

Agenda

The Contract

Market

Asset  
Allocation

Stress Testing

Conclusion

- **Risk management** of financial risk induced by a participating contract with minimum guarantee
  - Consiglio et al. (2006): reference portfolio structuring by means of non linear programming using the Wilkie model
  - Bernard et al. (2006): investment strategies for the corresponding safety loading in a market set up á la Merton (1974)

# Aims and objectives

Risk  
management  
of guarantees

Laura Ballotta  
FIN @ CASS

Agenda

The Contract

Market

Asset  
Allocation

Stress Testing

Conclusion

- **Risk management** of financial risk induced by a participating contract with minimum guarantee
  - Consiglio et al. (2006): reference portfolio structuring by means of non linear programming using the Wilkie model
  - Bernard et al. (2006): investment strategies for the corresponding safety loading in a market set up á la Merton (1974)
- **(Static) Asset allocation approach**
  - Risk minimization
  - Chosen “risk measure”: volatility of the guaranteed benefit with respect to prespecified target
- Analysis of
  - market consistent value of embedded options and safety loading
  - probability of default and Solvency II capital requirements
  - robustness of the approach

# Agenda

Risk  
management  
of guarantees

Laura Ballotta  
FIN @ CASS

Introduction

Agenda

The Contract

Market

Asset  
Allocation

Stress Testing

Conclusion

- 1 The Participating contract
  - Design
  - Embedded options
  - Safety loading
- 2 The reference portfolio
- 3 The market model
- 4 Asset Allocation
- 5 Stress Testing

# The Participating Contract

Risk  
management  
of guarantees

Laura Ballotta  
FIN @ CASS

Introduction

Agenda

The Contract

The Participating  
Contract

Embedded options

Reversionary  
bonus

Market

Asset  
Allocation

Stress Testing

Conclusion

- Starting time:  $t = 0$ ; maturity:  $T = 20$  years
- Single premium:  $\pi_0$
- Reference fund:  $F(t)$
- Leverage coefficient:  $\theta$  such that

$$\pi_0 = \theta F(0)$$

# The Participating Contract

Risk  
management  
of guarantees

Laura Ballotta  
FIN @ CASS

Introduction

Agenda

The Contract

The Participating  
Contract

Embedded options

Reversionary  
bonus

Market

Asset  
Allocation

Stress Testing

Conclusion

- Starting time:  $t = 0$ ; maturity:  $T = 20$  years
- Single premium:  $\pi_0$
- Reference fund:  $F(t)$
- Leverage coefficient:  $\theta$  such that

$$\pi_0 = \theta F(0)$$

- **Benefit at maturity:**
  - **Guaranteed component:**  $\pi(T)$
  - **Discretionary component** (terminal bonus):

$$R(T) = (\theta F(T) - \pi(T))^+$$

- Terminal bonus rate:  $\gamma$

# The fair pricing condition

Risk  
management  
of guarantees

Laura Ballotta  
FIN @ CASS

Introduction

Agenda

The Contract

The Participating  
Contract

Embedded options

Reversionary  
bonus

Market

Asset  
Allocation

Stress Testing

Conclusion

- Benefit paid **IF** company solvent at  $T$   
 $\Rightarrow$  overall liability:

$$\pi(T) + \gamma R(T) - D(T)$$

where

$$D(T) = (\pi(T) - F(T))^+$$

payoff of the “**Default Option**”

- No arbitrage condition:

$$\pi_0 = V_\pi(0) + \gamma V_R(0) - V_D(0)$$

# The fair pricing condition

Risk  
management  
of guarantees

Laura Ballotta  
FIN @ CASS

Introduction

Stress Testing

Conclusion

- $\pi(t) = \pi(t-1)(1 + r_\pi(t)) \quad t = 1, 2, \dots, T$
- $r_\pi(t) = \max \left\{ r_G, \frac{\beta}{n} \left( \frac{F(t)}{F(t-1)} + \dots + \frac{F(t-n+1)}{F(t-n)} - n \right) \right\}$
- $r_G$  is the minimum guarantee
- $\beta \in (0, 1)$  is the participation rate
- $n = \min(t, \tau)$ , where  $\tau$  is the length of the smoothing period
- $r_\pi(t) = r_G + \left( \frac{\beta}{n} \sum_{i=1}^n \frac{F(t_i)}{F(t_{i-1})} - (\beta + r_G) \right)^+$
- Sequence of **Asian call options** + risk free bond  
(No closed formulae for the price of the embedded options)

# Market model

Risk  
management  
of guarantees

Laura Ballotta  
FIN @ CASS

Introduction

Agenda

The Contract

Market

Asset  
Allocation

Stress Testing

Conclusion

- **Reference Portfolio**: equity & bonds

$$F(t) = \alpha F(t-1) \underbrace{\frac{S(t)}{S(t-1)}}_{\text{equity}} + (1 - \alpha) F(t-1) \underbrace{\frac{P(t, T)}{P(t-1, T)}}_{\text{bond}}$$

- **Market Model** (simplified)
  - Equity  $\rightarrow$  Geometric Brownian motion
$$dS(t) = \mu S(t) dt + \sigma S(t) dW(t)$$
  - Interest rates  $\rightarrow$  Hull and White model
$$dr(t) = \kappa(a(t) - r(t)) dt + v dZ(t)$$
  - Equity and interest rate are correlated

Stress Testing

Conclusion

## ● Monte Carlo simulation

- 1 Solve numerically the given optimization problem  $\rightarrow \alpha^*$
- 2 Obtain the corresponding no-arbitrage prices of the embedded options  $\rightarrow V_\pi(0), V_R(0), V_D(0)$
- 3 Derive the “fair” terminal bonus rate  $\rightarrow \gamma$   
$$\gamma = (\pi_0 + V_D(0) - V_\pi(0)) / V_R(0)$$
- 4 Calculate the safety loading  $\rightarrow \varphi$   
$$\varphi = V_D(0) / \pi_0$$
- 5 Compute the corresponding solvency indices

Stress Testing

Conclusion

- Asset allocation strategy aimed at risk management of participating life insurance
  - minimum guarantee
  - reversionary bonus
  - terminal bonus
- Impact on capital requirements
- Results consistent with regulatory requirements imposed by Solvency II regime
- Optimal value of the design parameter  $\beta$
- Results are robust under stress testing
- Work in progress: further investigation of approach robustness via scenario generation
